React. js   Web Scraping   Browser Automation

500+ DSA problems solved   MySql   MongoDB

Firebase   Bootsrap       Solidity

## PERSONAL PROJECTS

### ESPN Cricket Information
- Uses HTML, CSS, JS, WebScraping
- Scrapes relevant information from vast amount of data present on these sites.
- Makes folders on your system of each teams played in particular season and there info like player's run, wickets, venue, SR, winner in a structured word file form for each player.
- Increases readability of data and user just needs to provide link of season.

### Online Openboard
- Uses HTML, CSS, Js, CANVAS API, Socket.io
- Enables to perform CRUD operations on canvas.
- Extra features like sticky images, on which you can type or open previous classes images. Undo, redo, variable size of pens, colors erasers, etc.
- Many people can connect on same link, having lag free experience implemented by Socket.io .

### Movies Web App
- Uses ReactJS, Bootstrap and localstorage of browser.
- Shows upcoming, lastest and popular movies with hover effects.
- Users can add movies in favourite section which uses localstorage, it is divided in categories of genres and can be sorted on basis of rating and popularity.
- Each movie has detailed description of watch time, overview, rating, production teams and useful links to watch movie.

### Food Delivery System
- Uses React.js, React Redux, Firebase, Tailwind CSS, localstorage
- User can order food items, and add in cart and make secure payments with cards implemented using Stripe API.
- Has engaging and attractive UI and authentication by Firebase.
